# **TABLE OF CONTENTS**

- Capital Market Assumption Background
- NEPC Assumption Overview
- Comparison to 2019 Study Assumptions
- NEPC Detailed Assumptions

## CAPITAL MARKET ASSUMPTIONS OVERVIEW

- Across the financial services industry, a number of providers develop forward looking capital market return and risk assumptions.
- The process for developing these assumptions and the use cases amongst investors can vary widely.
- For institutional investors, long-term (10+ year) capital market assumptions are generally used to set strategic asset allocation policy.
- As noted, there is a wide range of methodologies used to develop assumptions.
- The purpose of today's discussion is to identify the capital market methodology to be used during the 2023 asset/liability study.

## **ASSUMPTION METHODOLOGY OVERVIEW**

While the exact methodology for developing assumptions is likely to be different across every provider, there are a few common attributes that can help distinguish one provider from the next.

#### Time Horizon

- 10- and 30-year time horizons are most common, with 20-year assumptions also utilized regularly
- While some providers develop short-term (<10 year) assumptions, these are rarely used to set strategic asset allocation policy

#### Style

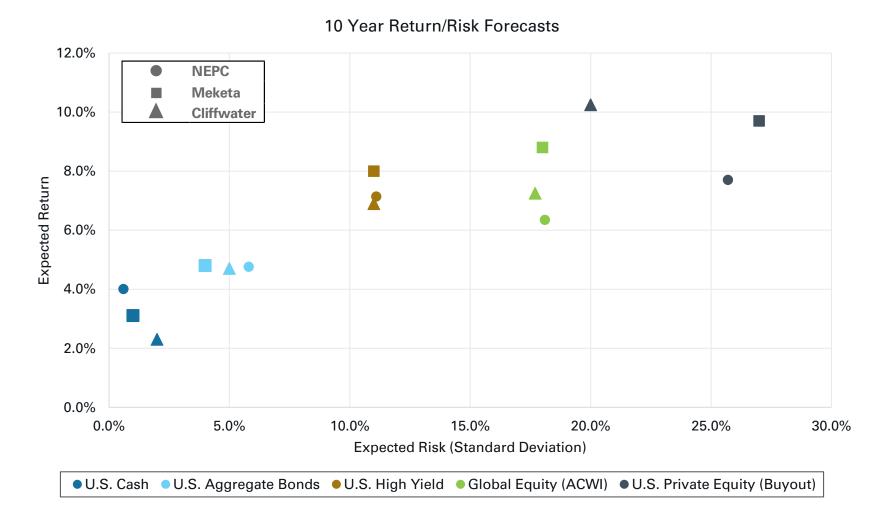

- Most providers blend quantitative and qualitative methods to generate assumptions
- A "building block" approach is a common way to develop assumptions
- The use of current market conditions (e.g. interest rate levels, equity market valuations, etc.) is also relatively common

#### Other Attributes

- Definitions across asset classes/strategies may vary between providers
- Some providers include active management premiums (vs. beta-only assumptions)

# **CONSULTANT RETURN FORECAST COMPARISON**

Return forecasts sourced directly from each provider.

Return forecasts sourced directly from each provider. All data is based on 10-year geometric assumptions. Research Affiliates data is as of 1/31/2023. BNY Mellon data is as of 9/30/2022

## **ASSET CLASS ASSUMPTIONS**

#### DEVELOPMENT

- Assumptions are published for over 70 asset classes
  - NEPC publishes return forecasts for 10-year and 30-year periods
- Market data as of 12/31/2022
  - Assumptions are developed with NEPC valuations models and rely on a building block approach
- The 10-year return outlook is intended to support strategic asset allocation analysis
- 30-year return assumptions are used for actuarial inputs and long-term planning

#### **Asset Allocation Process**

- Finalize list of new asset classes
- 2. Calculate asset class volatility and correlation assumptions
- 3. Set model terminal values, growth, and inflation inputs
- 4. Model data updated at quarter-end
- Review model outputs and produce asset class return assumptions
- 6. Assumptions released on the 15<sup>th</sup> calendar day after quarter-end

## **ASSET CLASS BUILDING BLOCKS**

#### **METHODOLOGY**

- Asset models reflect current and forecasted market data to inform expected returns
- Systematic inputs are paired with a long-term trend to terminal values
- Model inputs are aggregated to capture key return drivers for each asset class
- Building block inputs will differ across asset class categories

2023 Assumptions based on NEPC's 12/31/2022 10-year return forecasts. 2019 assumptions based on NEPC's 5-7 year return forecasts from the 2019 Asset/Liability study. Return assumptions are geometric.

2019

## INFLATION ASSUMPTIONS

#### **OVERVIEW**

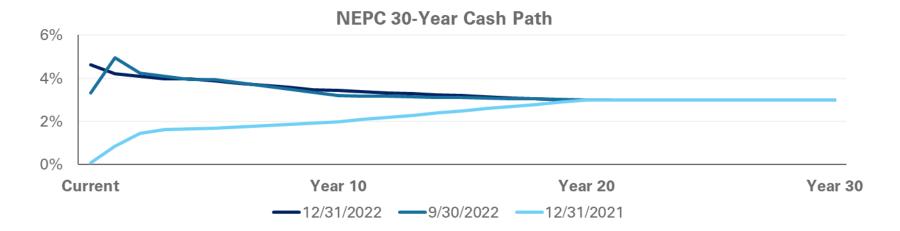

- Inflation is a key building block to develop asset class assumptions
- Inflation assumptions are model-driven and informed by multiple inputs for both the U.S. and global assets
  - Includes forecasts from international organizations (e.g. IMF), local consumer and producer price indices, global interest rate curves, and break-even inflation expectations
- NEPC's U.S. inflation expectations reflect stickier inflation over the near-term, but a stable inflation outlook over the long-term
  - We anticipate continued volatility among inflation measures as market-based inflation expectations diverge from current consumer inflation metrics

| Region        | 10-Year Inflation<br>Assumption | 30-Year Inflation Assumption |
|---------------|---------------------------------|------------------------------|
| United States | 2.5%                            | 2.6%                         |

# U.S. CASH

#### **EXPECTATIONS**

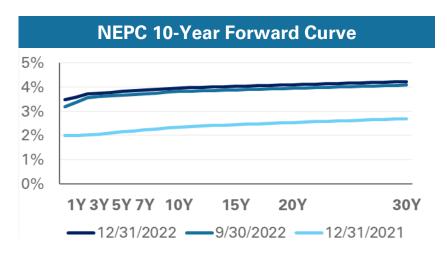

- Cash is a foundational input for all asset class return expectations
  - Cash + risk premia is an input for long-term asset class return projections
- Cash assumptions reflect inflation and real interest rates
- U.S. nominal rate forecasts reflect continued tighter policy in the nearterm, but long-term expectations remain subdued relative to history

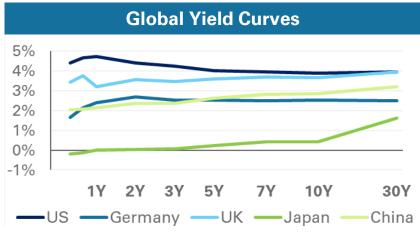

## **GLOBAL INTEREST RATE**

#### **EXPECTATIONS**

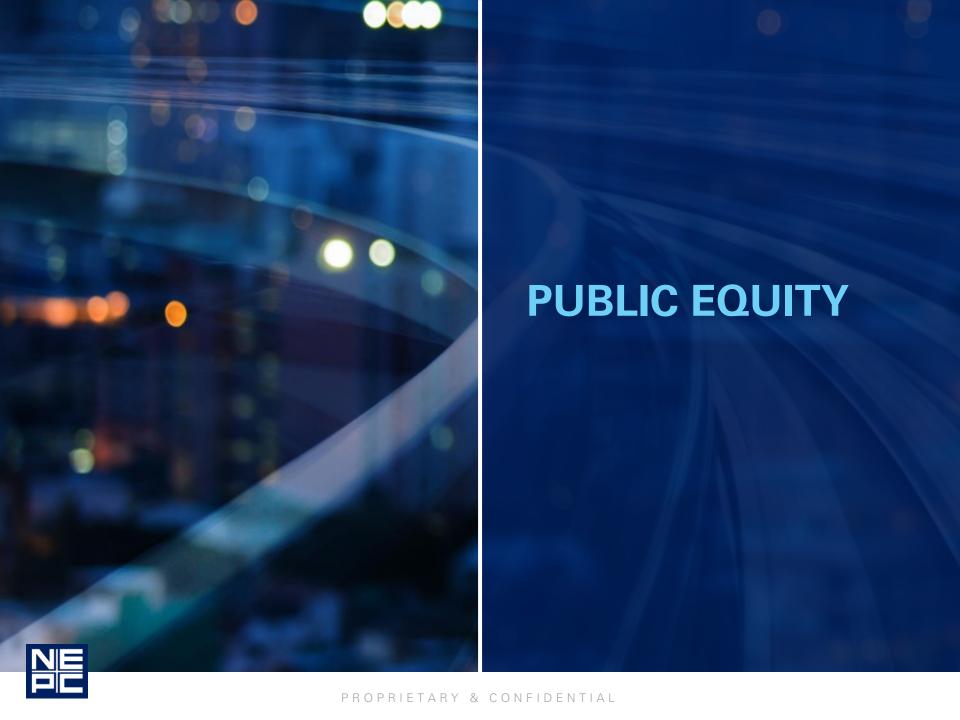

- Real yields have normalized, reflecting the transition to a tighter policy environment
  - Higher real rates support returns in the long-term, but also signal a shift in risk posture for markets
- The transition to tighter Fed policy has lifted bond yield forecasts
- The outlook is relatively poor for Non-U.S. developed markets due to the nominal yield differential
- Emerging market real rates and nominal interest rates are higher relative to the developed world

Sources: FactSet, NEPC

## PUBLIC EQUITY ASSUMPTIONS

#### **OVERVIEW**

- Current valuation multiples across public equities have moved lower,
   reflecting a tighter monetary policy and elevated inflation environment
  - Equity valuation multiples are sensitive to higher interest rates, though inflation can positively impact nominal revenue growth
- Long-term valuation multiples underlying equity return assumptions have lowered as well, reflecting the impact of higher interest rates
- NEPC's strategic equity targets reflect a bias to the U.S. and Emerging Markets over Non-U.S. Developed relative to the MSCI ACWI IMI
  - The return assumption for emerging markets is highest among public equities, driven by the long-term opportunities in Asia
- NEPC encourages a strategic bias to small-cap with the use of active management relative to small-cap exposure in the MSCI ACWI IMI

## FIXED INCOME ASSUMPTIONS

#### **OVERVIEW**

- Fixed income return assumptions are higher, reflecting the transition to tighter monetary policy to offset ongoing inflationary pressures
- NEPC remains committed to a dedicated Treasury allocation given the upward movement in interest rates and return expectations
- Safe-haven fixed income exposure is a critical liquidity source for the portfolio and offers downside protection in periods of market stress
  - Sizing of the safe-haven exposure is a strategic exercise and reflects investor return objectives, risk-tolerance, and private market pacing plan needs
- High-quality fixed income is an asset class designed to support lower volatility portfolios and larger strategic targets to fixed income
  - Investment grade credit and TIPS offer exposure to nominal and real interest rates plus cyclical diversification benefits to the overall fixed income portfolio
- The use of return-seeking credit investments requires a more dynamic posture to manage shifts in credit spreads and market cycles

# **FIXED INCOME ASSUMPTIONS**

## **BUILDING BLOCKS**

| Illiquidity<br>Premium              | The return expected for assets with illiquidity risk                            |
|-------------------------------------|---|
| Government<br>Rates Price<br>Change | Change due to shifts in current yields relative to forecasted rates             |
| Credit<br>Deterioration             | The average loss for credit assets due to defaults and recovery rates           |
| Spread Price<br>Change              | Valuation change due to changes in credit spreads relative to long-term targets |
| Credit<br>Spread                    | Yield premium provided by securities with credit risk                           |
| Government<br>Rates                 | The yield attributed to sovereign bonds that do not have credit risk            |

| Asset Class                | 12/31/22<br>10-Yr Return | 12-Month<br>Change |
|----------------------------|--------------------------|--------------------|
| U.S. TIPS                  | 4.4%                     | +3.0%              |
| U.S. Treasury Bond         | 4.2%                     | +2.7%              |

## REAL ASSET ASSUMPTIONS

#### **OVERVIEW**

- The strategic outlook for real assets reflects a high level of uncertainty due to the elevated near-term inflation environment
  - Real assets offer a meaningful portfolio diversification benefit, but are sensitive to a wide range of potential inflation scenarios
- Real assets exhibit different betas to inflation and each asset class is exposed to various economic factors
  - Diversification and correlation benefits are helpful to a portfolio but must be carefully considered relative to the expected risk premium
- Strategic asset allocation targets for real assets are determined by investor objectives, including the need for portfolio inflation sensitivity
  - Short-term changes in market inflation dynamics should not dictate a portfolio's strategic need for real asset exposure
- Building portfolio inflation sensitivity is a strategic exercise and is wellaligned with an appropriately sized private real assets pacing program
  - The strategic outlook for real assets is volatile as market expectations conflict with the near-term inflation path and longer-term deflationary forces

## **ALTERNATIVE ASSETS**

#### **METHODOLOGY**

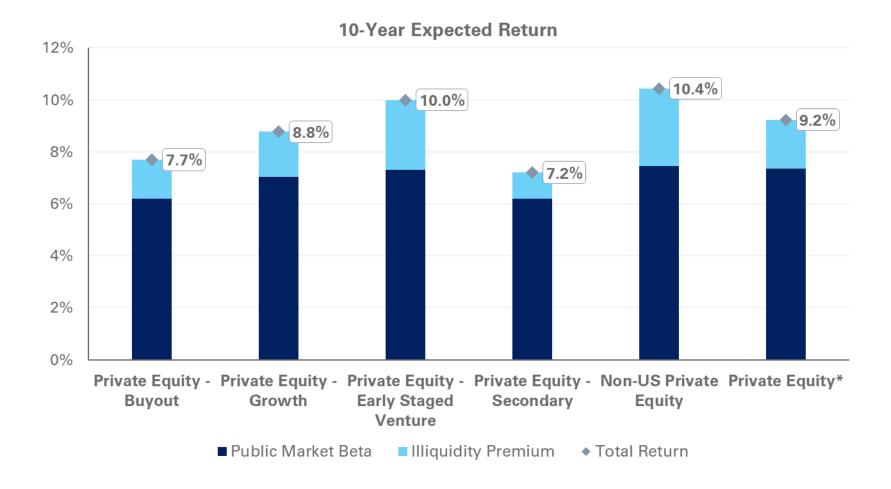

- Private market assumptions are constructed from betas to public markets with an added illiquidity premia
  - Historically, the observed illiquidity premium has been a significant component driving private market returns
- Hedge fund assumptions are constructed from betas to public markets with an added alpha assumption

## **GOALS AND OBJECTIVES FROM 2019 STUDY**

- Asset Allocation Review process should incorporate philosophy expressed in current IPS document
  - Desire to maintain a diversified portfolio
  - Use of active and passive management
  - Consideration of inflation sensitivity and hedging
- Understanding of risk tolerance should incorporate liabilities
- Continue progress towards full funding of plan liabilities
  - Preference to mitigate potential declines in funded status
  - Staff, NEPC and GRS to evaluate appropriate thresholds vs. down market scenarios
- Evaluate impact of any changes in assumptions or to Policy portfolio on required plan contributions

## **QUANTITATIVE OBJECTIVES FROM 2019 STUDY**

#### **SIC Goals**

#### Improving Fund sustainability and progressing towards a fully funded plan

Maintain or improve probability of 100% funding ratio in 20 years

#### **Risk Constraints**

#### Achieve a more stable return path by managing and mitigating risks accordingly

- Limit the probability of funding level falling below 50% in next 5 years (current funding level 54%) to ~15%
- Limit the probability of a 2% absolute increase in employer contribution rate (expressed as a percentage of payroll) to ~25% in any given year within next 10 years
- Within 90% confidence, maintain at least 3x the annual benefit payment amount in assets with daily/weekly liquidity profile in a recessionary scenario

## DRAFT ASSET/LIABILITY STUDY TIMELINE

- We anticipate the full asset/liability study will take 4 to 5 months to complete.
- The schedule below provides a high-level overview of the steps involved and the estimated timing to complete each step.

| Step/Milestone   | Timing         |
|--|----------------|
| Kickoff – Capital Market Assumptions, Asset Class Opportunity Set, Return Target, Risk tolerance | Month 1        |
| NEPC Coordinates with Plan Actuary on Data Needs   | Month 1        |
| NEPC Prepares Baseline Forecast Results  | Month 2        |
| Discuss Baseline Results and Alternative Portfolios  | Month 2        |
| NEPC Prepares Analysis of Alternative Portfolios   | Month 3        |
| Discuss Alternative Portfolios and Preliminary Findings  | Month 3        |
| NEPC and State of RI Staff Prepare Recommendation  | Month 4        |
| Final Recommendation Delivered to SIC  | Month 4        |
| Portfolio Implementation Discussion  | Post-A/L Study |

## **NEPC DISCLOSURES**

Past performance is no guarantee of future results.

All investments carry some level of risk. Diversification and other asset allocation techniques do not ensure profit or protect against losses.
